

Santiago D. Rodríguez M.

Frontend Developer

Elche, Spain, 03206 | [GitHub](#) | Portfolio | [LinkedIn](#) | santiagodrm@gmail.com | +34 633 874780

Education

I.U.P “Santiago Mariño” - IT Systems Engineer (Degree issuance pending)

August - 2026

Skills

Languages: TypeScript, JavaScript, HTML5, CSS3, SQL

Frontend Development: React, TanStack Query, React Router, TanStack Router, Redux Toolkit, Zustand, Tailwind CSS, React Hook Form, Zod, Vite, TanStack Start

Integration & Testing: REST APIs, Axios, Auth0, Stripe, Playwright, Vitest

Tools & DB: Git, GitHub, Docker, GitHub Actions, Prisma, PostgreSQL, Figma/Stitch, AWS (S3, EC2, SES)

AI-Assisted Development: Agentic development workflows (Claude Code, Codex, Gemini), AI coding harnesses, specification-driven development, automated code analysis

Methodologies: Agile, Scrum, Soft Systems Methodology, requirements analysis, iterative development

Work History

Autoparts Rausseo – REPO LINK (AJUSTAR)

August 2026 – Present

Independent Frontend Developer

Remote

- Led end-to-end discovery for 2 client engagements, translating stakeholder workflows, operational constraints, and business risks into prioritized frontend requirements and clearly bounded MVPs.
- Designed role-aware inventory and product-catalog experiences for customers, operators and administrators, defining typed navigation and validation boundaries with TanStack Router, TypeScript, and Zod.
- Applied Scrum, and Soft Systems Methodology to validate requirements directly with clients and divide complex business processes into testable delivery increments, reducing ambiguity before implementation.
- Established a frontend development foundation using TypeScript, TanStack Start, Vitest, and GitHub Actions, with typed routing, environment validation, responsive design references, and 4 continuous-integration quality gates.

Projects

Artisanal Food Marketplace – REPO LINK

July 2026 - Present

- Built a React and TypeScript web application with 22 API-connected screens with React and TypeScript across 3 operational roles, using TanStack Query and REST APIs to support product discovery, checkout, fulfillment, inventory, incidents, and account administration.
- Implemented protected navigation for 3 distinct user journeys using React Router and Auth0, integrating frontend authentication and authorization with backend-controlled role permissions.
- Translated visual references into reusable Tailwind CSS design tokens and responsive web design patterns, delivering consistent UI development across customer, producer, and administrator interfaces.

Pharmacy Inventory Management System – REPO LINK

June 2026 - Present

- Developed a role-aware single-page application (SPA) with React and TypeScript SPA spanning 9 routed screens for 3 user roles, using React Router and Axios for REST API integration.
- Designed a component-based frontend architecture using TanStack Query, Zustand, React Hook Form, and Zod, separating server-state management, authentication state, validated forms, business logic, and reusable UI components.
- Authored 5 Playwright end-to-end (E2E) tests, covering authentication and 4 connected administrative workflows for categories, suppliers, users, and products across the complete UI-to-API lifecycle
