

Santiago D. Rodríguez

Fullstack Developer

Spain, 03206 | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | santiagodrm@gmail.com | +34 633 874780

Fullstack Developer and IT Systems Engineer with +3 years building fullstack web applications. React/TypeScript on the frontend, Node.js/Express/PostgreSQL on the backend. Skilled in REST API design, role-based authentication, relational data modeling, and automated testing.

Education

I.U.P “Santiago Mariño”

IT Systems Engineer

Work History

Autoparts Rausseo

[Website](#)

Fullstack Developer

Remote

- Built a responsive automotive-parts catalog with React 19, TypeScript, TanStack Start, and Prisma, combining search, filtering, sorting and pagination to help customers discover products from inventory data.
- Built a product catalog administration system with Better Auth, TypeScript, and Prisma, using role-based access controls and Cloudinary image management so only authorized staff could update products, categories, and specifications.
- Established automated unit, end-to-end and responsive testing with Vitest and Playwright, validating 25 acceptance scenarios and protecting critical catalog and inquiry journeys across desktop and mobile.

HighMeds Pharmacy

[Live Demo](#)

Fullstack Developer

Remote

- Developed a role-aware pharmacy management SPA using React, TypeScript, React Router, and Axios, helping users manage inventory and administrative operations through a centralized interface.
- Built a secure REST API with Node.js, TypeScript, Express, and Prisma/PostgreSQL in 8 business areas, using JWT authentication and role-based permissions to give the web application a type-safe data layer.
- Built 5 Playwright end-to-end tests for authentication and 4 key administrative workflows, helping ensure critical inventory and user-management processes worked reliably.

Projects

Artisanal Food Marketplace

[Live Demo](#)

- Developed a React and TypeScript marketplace with 22 API-connected screens, enabling customers, producers, and administrators to manage their core workflows efficiently.
- Built a modular REST API with Node.js, Express, and TypeScript across 13 business areas, providing +45 Zod-validated endpoints to support customer, producer, and administrator workflows in the marketplace.
- Integrated Stripe for payment processing and AWS S3/SES for image storage and automated email, supported by 70 Vitest test suites to help prevent business-critical features from breaking in the future .

Skills

Languages: TypeScript, JavaScript, HTML5, CSS3, SQL

Frontend Development: React, Next.js, React Router, TanStack Query, TanStack Router, Redux Toolkit, Zustand, Tailwind CSS, React Hook Form, Zod, Vite, TanStack Start

Integration & Testing: Vitest, Playwright, React Testing Library, REST API, Axios, Stripe, Better Auth

Backend & Data: Node.js, Express.js, Prisma ORM, PostgreSQL, JWT Authentication, OAuth

Tools & Delivery: Git, GitHub, Docker, GitHub Actions (CI) , Figma, AWS (S3, EC2, SES), Postman

AI-Assisted Development: Agentic development workflows (Claude Code, Codex, Gemini), AI coding orchestration, specification-driven development, automated code analysis

Methodologies: Agile, Scrum, Soft Systems Methodology, requirements analysis, iterative development
